

USER GUIDE

AI Skin Intelligence & Personalized Skincare Platform

User Guide for Users, Dermatologists and Consultants

Application: <https://ai-skin-intelligence-personalized-skincare-planner-5edjzgn7u.vercel.app/>

1. Introduction

SkinIQ is an AI-enabled personalized skincare platform designed to help users understand their skin profile, complete skin assessments, receive personalized skincare recommendations, track progress, and communicate with skincare professionals. The platform provides separate workflows for general users, dermatologists, and consultants.

This guide explains how each type of user can access the platform, create or access an account, complete the available activities, manage information, review recommendations, and use the professional features.

2. Getting Started

2.1 Opening the Application

Open the deployed SkinIQ application in a modern web browser. The application can be accessed through the project deployment URL provided by the project team.

For development or testing, the application may also be run locally. The frontend and backend must be running for login, registration, assessments, recommendations, and other server-based features to work correctly.

2.2 Creating an Account

1. Open the Login page and select "Create an account".
2. Enter your full name.
3. Enter a valid email address.
4. Enter a password according to the application's password requirements.
5. Select the appropriate account type if the registration screen provides that option.
6. Submit the registration form.
7. After successful registration, use the newly created credentials to sign in.

Note: A Google account can be used through the Google authentication option when Google OAuth is correctly configured for the current deployment environment.

2.3 Signing In

8. Open the Login page.
9. Enter the registered email address.
10. Enter the account password.
11. Click "Sign in".

12. After successful authentication, the platform opens the appropriate dashboard based on the account role.

If Google authentication is enabled, select “Continue with Google” and complete the Google authentication process. The browser is then redirected back to SkinIQ.

2.4 Signing Out

13. Open the account or navigation menu.
14. Select “Logout” or “Sign out”.
15. The current session is ended and the application returns to the login or public page.

3. User Guide – General User

The general user workflow is intended for people who want to assess their skin, maintain a personal skin profile, receive personalized skincare guidance, monitor progress, and access professional support where available.

3.1 User Dashboard

After login, the user dashboard acts as the main control center. Depending on the features enabled in the deployed version, it can provide access to the skin profile, assessments, recommendations, routines, progress information, reports, notifications, and account settings.

- Review your current skin-related information.
- Start or continue a skin assessment.
- View personalized recommendations.
- Review skincare routines and suggested products.
- Track changes and progress over time.
- Access professional consultation features when available.

3.2 Completing a Skin Assessment

16. Open the Assessment section from the dashboard.
17. Read each question carefully before selecting an answer.
18. Provide information about your skin type, concerns, habits, routine, and other requested details.
19. Upload an image when the assessment requires image-based analysis.
20. Review the entered information before submitting.
21. Submit the assessment and wait for the analysis to complete.

The platform processes the submitted information through its configured application and AI/ML services. The resulting assessment is used to support personalized recommendations.

3.3 Viewing Skin Analysis and Recommendations

22. Open the Results, Recommendations, or relevant dashboard section.
23. Review the detected or selected skin concerns.
24. Read the explanation associated with each recommendation.
25. Review the suggested skincare routine or products.
26. Follow the recommended routine according to the instructions shown by the platform.
27. Revisit recommendations when your assessment or profile changes.

Note: AI-generated skincare information should be treated as supportive information and not as a substitute for professional medical diagnosis or emergency medical care.

3.4 Managing the Skin Profile

28. Open the Skin Profile or Profile section.
29. Review the stored personal and skin-related information.
30. Update information when your circumstances or skincare needs change.
31. Save the changes.

Keeping profile information current helps the platform use the most recent available information when generating personalized guidance.

3.5 Tracking Progress

32. Open the Progress section.
33. Select the available progress record, assessment, or reporting view.
34. Compare previous and current information shown by the platform.
35. Review trends, completed activities, or progress indicators.
36. Continue recording information consistently for meaningful longitudinal tracking.

3.6 Notifications and Reminders

Where enabled, users can receive notifications related to skincare activities, reminders, recommendations, or professional interactions. Notification preferences can be managed through the relevant account settings.

3.7 Updating Account Information

37. Open Account Settings or Profile.
38. Edit your name or email information as permitted.
39. Save the updated information.
40. If password management is available, open the password section and follow the change-password process.

Note: If the account was created using Google authentication and does not have a local password, password-changing functionality may not be available for that account.

4. User Guide – Dermatologist

The dermatologist workflow is intended for authorized dermatology professionals who review user information, assessments, reports, and consultation-related activities.

4.1 Dermatologist Login

41. Open the SkinIQ Login page.
42. Enter the authorized dermatologist account credentials.
43. Click “Sign in”.
44. After authentication, the dermatologist dashboard is displayed.

Note: Professional features are role-based. A normal user account should not be used to access dermatologist-only functionality.

4.2 Dermatologist Dashboard

The dermatologist dashboard provides access to professional workflows made available by the application, such as client/user records, assessments, reports, consultations, recommendations, and relevant notifications.

- View assigned or available client records.
- Review submitted skin assessments.
- Inspect relevant user profile information.
- Review progress and reports.
- Provide professional observations or recommendations where supported.
- Manage consultation-related activities.

4.3 Reviewing a User/Client

45. Open the client or user management section.
46. Search for or select the required user.
47. Open the user's profile.
48. Review the available assessment information and history.
49. Review relevant reports, progress records, and submitted information.
50. Use the available professional tools to document observations or recommendations.

4.4 Reviewing Assessments and Reports

51. Open the assessment or report associated with the user.
52. Review the submitted answers and available analysis.
53. Check relevant historical records when available.
54. Use the report information as supporting context for professional review.
55. Record appropriate professional recommendations or follow-up actions when the feature is available.

4.5 Professional Recommendations

Dermatologists can use the platform's available professional tools to complement their clinical workflow. Any recommendation should be based on professional judgment and the information available to the dermatologist.

5. User Guide – Consultant

The consultant workflow is intended for authorized skincare consultants who support users through personalized skincare guidance, client management, recommendations, follow-up, and consultation activities.

5.1 Consultant Login

56. Open the Login page.
57. Enter the authorized consultant credentials.
58. Click “Sign in”.
59. The platform opens the consultant dashboard after successful authentication.

5.2 Consultant Dashboard

The consultant dashboard provides access to the client and skincare-support features enabled for the consultant role.

- View client information available to the consultant.
- Review skin assessments and user concerns.
- Check recommendations and routines.
- Manage consultation-related tasks.
- Review progress and follow-up information.
- Communicate or document consultation information where supported.

5.3 Managing Clients

60. Open the Clients or Client Management section.
61. Search for the required client.
62. Open the client's record.
63. Review available profile, assessment, routine, and progress information.
64. Perform the permitted consultation action.
65. Save any changes or notes.

5.4 Providing Skincare Guidance

66. Review the user's assessment and current concerns.
67. Review the AI-generated recommendations available in the system.
68. Consider the user's existing routine and relevant information.
69. Provide appropriate consultation guidance using the available platform features.
70. Record or save the consultation outcome when applicable.

Note: Consultant guidance should remain within the consultant's professional scope. Medical diagnosis or treatment decisions should be handled by an appropriately qualified medical professional.

8. Quick User Workflow

General User:

71. Open SkinIQ → Register/Login → Complete Profile → Complete Assessment → View Analysis → Review Recommendations → Follow Routine → Track Progress.

Dermatologist:

72. Login → Open Professional Dashboard → Select Client → Review Profile & Assessment → Review Reports/Progress → Provide Professional Input → Save/Follow Up.

Consultant:

73. Login → Open Consultant Dashboard → Select Client → Review Assessment & Routine → Provide Consultation Guidance → Record Follow-Up → Monitor Progress.
